Plant Bulbs Now

Early planting produces longer stems and early blooms.
Flowering Bulbs For Fall Planting

There are no flowers which will give more pleasure and satisfaction than the Winter and Spring Flowering Bulbs. Their culture is so simple and easily understood that anyone can have splendid success with them by exercising a little care and foresight. On the Pacific Coast most bulbs may be planted from October to February. Bulbs planted in October or November will give better results than if planted later. By planting early flowering bulbs, it is possible in our mild climate to have a continuation of flowers the year round.

Tulips

The climate on the Pacific Coast is ideal for the growing of Tulips. They may be left in the ground from year to year, otherwise the directions for culture are the same as for hyacinths, except that tulips cannot be grown in water.

EARLY SINGLE TULIPS

The following list is made up entirely of the best varieties, all of which are suitable for either forcing or bedding. We import only the highest grade first size bulbs which always give the best results. Malmo pays the postage.

Owing to the unfavorable weather in Holland last year, causing partial failure of the bulb crop which forced prices upward, we are unable to offer all the varieties of Holland bulbs at the extreme low prices that we have heretofore quoted. But we consider ourselves fortunate to have at our disposal the entire supply of one of the finest bulb farms on Puget Sound growing exclusively for us the choicest Daffodils and Narcissus.
Tulip Species or Rock Garden Tulips

These are one of the newer families of Tulips and the best for use in Rockery or Rock Gardens. They are very beautiful, and being low growing are especially fitted for this work. We have added this line of Tulips to our list knowing that every lover of Rock Gardens has felt their need. The following list, you will find, contains the best varieties.

**CLUSIANA.** Height 10". Cherry outside with a violet star inside. Native of Southern Europe. Each 15c; Doz. $1.50

**ECHLERI.** Height 6". Deep scarlet with violet base. A native of Turkestan. Each 15c; Doz. $1.50

**KAUFMANNIANA.** Height 4". Earliest Tulip, of striking beauty. Water lily shaped flower, blooming close to ground. Outside pink, inside beautiful primrose yellow with golden center. Native of Turkestan. Each 35c; Doz. $3.50

PLANTING TABLE FOR BULBS

In answer to our many inquiries on how to plant and space bulbs, we suggest the following:
Giant Darwin Tulips

Darwins are the most popular Tulips for outside planting. They flower in May, are of giant size and have a majestic beauty; distinctively their own that is invaluable for garden and landscape effects. They come in the most varied and brilliant colorings, and their immense flowers of perfect form and satiny, wax-like texture, long stems and lasting qualities, make them ideal for both bedding and cutting. Malmo pays the postage.

Bearing Size Fruit Trees

We specialize in the production of large, bearing-size fruit trees, to meet the ever increasing demand from the home orchardist who wishes to have fruit from one to three years earlier than by planting small trees.

This stock has been properly transplanted to insure a good root system and properly trained each year through pruning.

All of these trees are strong and vigorous, and can be strongly recommended. Prices are in accordance with size and development, which are the factors influencing early bearing, rather than age only.

Mammoth Single Hyacinths

Single Hyacinths are more desirable than the double. They are better for forcing, more vigorous in growth and are more beautiful than those of the double sorts. Customers at a distance will find it convenient to order bulbs by mail. MALMO PAYS THE POSTAGE.

OUTDOOR CULTURE. The bulbs may be planted any time from October to February. They succeed in any good, well drained garden soil. Cut the tops between two and three inches below the surface and six to ten inches apart, with a little sand under and above them if it is convenient, being careful that none of the fertilizer comes in direct contact with the bulbs. Early planting brings the best results.

POT CULTURE IN THE HOUSE. Plant from September to December in rich, sandy loam, inserting the bulb (base downward) so that the top is just above the surface. Do not pack the soil in the pots, as the bulbs will be much less liable to push out when the root growth commences if the soil is not packed. Water thoroughly and set the pots away in a cool, dark place for three weeks. This will allow the roots to grow and become firmly fixed in the soil. The plants can then be brought into the light and will at once commence the top growth. Keep near the light, and at a temperature of 50 to 70 degrees. Water frequently.

WATER CULTURE. Fill the glass with water until the base of the bulb rests on the water. Set away in the dark for three weeks. Fill up the glass with water as fast as it evaporates. If the water becomes impure it should be changed and the roots well cleaned before putting in again. A small piece of charcoal put in the glass will keep the water pure much longer. Give as much fresh air as possible without a direct draught, plenty of light and keep the glasses full of water.

Plant from September to December in rich, sandy loam, inserting the bulb (base downward) so that the top is just above the surface.

Japanese Lilies

Lilies planted outdoors during the fall or early spring flower each year from June to October. After bulbs are set out they should remain undisturbed for five or six years. They will increase in size, beauty and number of flowers; our Coast climate being perfectly suited to their requirements. They may be planted in open ground or beds and are very effective when planted in a border either alone or among perennials or shrubbery.

Malmo pays the postage.
